

≡ ChatGPT ▾

✎ ↗ ...

That narrows it down considerably.

If your criteria are:

-  Works with **ChatGPT Free or Go**
-  **No paid subscription** required to the plugin itself
-  Useful for ADE/AKS
-  No "free trial" that expects you to upgrade

Then my recommendations become much stricter.

Priority	Plugin	Truly usable free?	Recommendation
★★★★★★	GitHub	 Yes	Install immediately.
★★★★★★	SciSpace	 Yes (limited but genuinely useful)	Install if you'll be doing research.
★★★★★☆	Figma	 Yes (free starter plan)	Only when UI work begins.
★★★★★☆	Dropbox	 Yes	Optional for external file storage.
★★★★☆☆	Notion	 Yes (personal plan)	Only if you want a project wiki.
★★★★☆☆	Airtable	 Yes	Only if spreadsheets become limiting.
★★★☆☆☆	Slack	 Yes	Only if collaborating with others.

Priority	Plugin	Truly usable tree?	Recommendation
★★★☆☆	Linear	✅ Yes	Only if GitHub Issues no longer suffice.

My "no-subscription" ADE list

If I were trying to keep the stack as lean as possible:

1. **GitHub**
2. **SciSpace**

That's it.

Everything else is either:

- solving a problem you don't have yet,
- duplicating GitHub's capabilities, or
- introducing another place where project information can become fragmented.

One question, though: when you say "**ChatGPT plugins**," are you referring to the **Connectors/Plugins available under ChatGPT's Tools menu**, or the **Discover GPTs** section with custom GPTs? OpenAI has changed the terminology over time, and the recommendations differ depending on which catalog you're looking at.

Yep, ok. Both are already installed.

Great. Then for ADE, the practical answer is very short:

GitHub and SciSpace are the only ones from that free/no-subscription lane that are clearly worth keeping active.

If you want, I can turn that into a tighter "keep / ignore / later" ADE plugin policy.

Excuse me?

Yeah, that message is understandably confusing.

From your screenshot, I can see:

- You're using the **GitHub tool** (the blue "GitHub" chip is active).
- After sending a message, ChatGPT returned "**You've hit your limit. Please try again later.**"
- It doesn't specify *which* limit.

That message can mean a few different things:

1. ChatGPT usage limit (most common on Free/Go plans)

- You may have hit a temporary cap on requests or on requests using tools.
- The limit usually resets automatically after some time.

2. Tool-specific rate limit

- The GitHub integration may have hit a request limit (either on the ChatGPT side or GitHub API side).
- In that case, plain ChatGPT conversations may still work, but GitHub-assisted ones won't until the limit resets.

3. Temporary service issue

- Occasionally the backend returns the generic "You've hit your limit" message even when it's actually a temporary service problem.

What I'd check

- **Turn off the GitHub tool** (tap the blue GitHub chip so it's no longer active) and send a normal message.
 - If that works, the issue is probably with the GitHub tool or its quota.
 - If it still fails, it's more likely a ChatGPT usage limit.
- Try starting a **new chat without any tools enabled**.
- Wait 15–60 minutes and try again if it persists.

One thing stands out

You mentioned you have a **Go** plan. If you're seeing this frequently while using GitHub, I'd be interested in figuring out whether **Go has a separate quota for tool invocations**. OpenAI doesn't publicly document all of those limits, and the UI isn't very specific.

If you'd like, I can help you narrow it down. Tell me:

- Does a **normal chat** (no GitHub, no SciSpace) still work?
- Or does **every** message give you the same "You've hit your limit" error?

That will tell us very quickly whether it's the GitHub tool or your overall ChatGPT usage.
