@GitHub Inspect PRs, triage issues, debug failing checks, and prepare code changes for review

 

I'll inspect the connected GitHub repos, then I can surface the most relevant PRs/issues and check any failing workflows.

Received app response ▾

I don't have any GitHub repositories available through the connected app right now, so I can't inspect PRs or issues yet.

Connect the GitHub app to the repo you want me to work on, or send the repository full name like `owner/name`, and I'll dig into the open PRs, issues, and failing checks.

     

@GitHubamarchogre/ADE

 

I'm pulling the repo metadata first, then I'll inspect the active PRs and open issues so I can prioritize what needs attention.

▾

I couldn't find `amarchogre/ADE` through the GitHub connection, so I can't inspect it yet.

The repo name may be slightly off, or the app may not be installed on that account. Send the exact `owner/repo` again, and I'll continue from there.
